## Roles and responsibilities as a Medical Technologist :

1 – During covid 19 i worked as a locum healthcare technician and lab technologist My responsibilities included both roles of screening in drive through tents and testing laboratory samples.

2 - Performed standard laboratory procedures in chemistry hematology, serology, and urinalysis performed routine instrument maintenance and routine quality control.

3 - Executed and analyzed tests such as coagulation studies, chemistry, serology and Urinalysis with microscopic evaluation.

4 - Performed all aspects of testing within clinical laboratory sections including blood bank, hematology Microbiology, and chemical pathology.

5 - Followed Federal Laboratory Guidelines for specimen handling and all medical lab procedures.

6 – Documented and maintained quality control, proficiency testing, quality assurance, and other records to meet regulatory requirement.

7 - Responsibilities varied phlebotomy, front desk and lab on daily basis while providing outstanding customer relations

8 - I work as a medical phlebotomist on many assignments interim assigned to me. I have significant relevant experience in all areas of specimen collection.

Registering patients, verifying identifications, and if applicable referrals.

Reviewing that patients laboratory forms have all appropriate, legal and needed information and in order.

9 - I was the assigned phlebotomist in the emergency room, which was more often than not a fast-paced environment. I was assigned to the

E.R. due to my ability to work in a fast, and at times chaotic scenario and maintain the level of professionalism which is expected, and my ability to use special techniques for difficult venipuncture.

I have ability for blood draws of +50 patients on average. Patient population included pediatric, adolescent, adult, and geriatric.

10 – Added responsibilities of patient care , Radiation Safety Officer , Hematology / Quality specialist.
